DETAILED ACTION

Allowable Subject Matter

1. Claims 24-35 allowed.
2. Claims 8 and 9 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1 and 4-7 rejected under 35 U.S.C. 103(a) as being unpatentable over Isomura (JP 2001068708) in view of Hayafuji et al. (5,677,922) further in view of Flores et al. (6,759,277)

Regarding Claims 1 and 4-7. Isomura discloses a semiconductor element, solar battery element and manufacture of the semiconductor element where in Fig. 4 a polysilicon layer 4 is formed having a different crystal orientation than layer 5 which is directly on top of it. Isomura fails to disclose a conductive layer between the two layers having two different crystal orientations and the required hydrophilic/hydrophobic surface requirement. However, Hayafuji et al. disclose a semiconductor laser with crystalline window layer where in Fig. 1(a), layers 26 and 8 have different crystal orientations and there are conducting layers between them. Furthermore, Flores et al. disclose a crystalline silicon die array and method for assembling

Art Unit: 2826

crystalline silicon sheets onto substrates where in Fig. 13 element 1310 and the claim 14 disclose the required hydrophilic/hydrophobic surface requirement.

It would have been obvious to one of having ordinary skill in the art the time the invention was made to include the required conductive layer between the first and the second layers having different crystal orientations and the hydrophilic/hydrophobic surface requirement in Isomura et al. as taught by Hayafuji et al. and Flores et al., in order to have a semiconductor device with more functionality.
